### HEAD SUPPORT

- **Comfort Plus Series** ........................................... 4
  The name says it all! When it comes to posterior head support, the Comfort Series is a must! Luxurious comfort with plush foam construction and sleek design make the Comfort Plus a favorite.

- **Tri Comfort Plus Series** ........................................... 6
  The Tri Comfort Plus Series has all of the benefits of the Comfort Plus Series in terms of comfort, luxury and style. What makes this headrest different is its three surfaces providing moderate lateral support. So don’t settle for less, choose our Tri Comfort Plus and increase your level of comfort today!

- **Adjustable Comfort Plus** ........................................... 8
  With two individually adjustable side pads offering 45° of angle adjustment, this headrest was designed for individuals with low tone or minimal head support. It also helps in discouraging lateral flexion for those individuals who have a tendency to hook around their head supports.

- **Contoured Series** .......................................................... 10
  Whether used as a stand alone posterior head support or as part of a larger system, the Contoured Series molded headrests are ergonomically formed and valued for their robust performance and economical price.

- **All Positioning Series** .................................................. 12
  When you need comfort and adjustability, depend on our All Positioning headrest. The AP Series offers a unique flexibility, constructed of malleable metal allowing a shape-on-demand quality, yet strong enough to retain its shape. When formed around the individual's head it is virtually invisible.

- **Combo Series** .............................................................. 14
  The Combo Series is a posterior head support that features three individual pads with adjustable wings. The lateral pads were designed to provide a wide degree of angle adjustment for optimal contact and support.

### HEAD POSITIONING

- **Stealth Ultra Series** .................................................. 16
  The "Ultra" head positioning system was the first product Stealth designed. Its advanced technology continues to evolve from the Ultra, to the Ultra QCR and now the Ultra QCRS; pioneering the new standard of head positioning.

- **Building an Ultra** .................................................... 17

- **Clinical Guidelines** ................................................... 18

- **What makes the SU the best?** ........................................ 19

- **i2i Series** .................................................................. 20
  The i2i has been one of Stealth’s signature products and one that is recognized around the world. The i2i head, neck and shoulder positioning system is offered in eleven different series. We have made significant improvements through the years and now have added a few more.

- **Real Results!** ............................................................. 21

- **i2i Overview** ............................................................. 22

### SWING-AWAY SYSTEMS

With the addition of Stealth’s swing-away hardware, you can upgrade a simple posterior head support into a head positioning system. Stealth’s swing-away hardware is designed to be reliable, lightweight, clean, and discreet so that the hardware blends in with its surrounding so “you see the person, not the hardware!” It features an easy one-hand release mechanism enabling pads and switches to swing away back 100°, and just as easily return to their original position. This convenient feature is useful for transfers, therapy, and fatigue issues. It’s no wonder why Stealth Products has moved to the “HEAD OF THE CLASS.”

- **Swing-Away Layout Options** ........................................ 25

Head Support & Positioning

Head Support vs. Head Positioning

When Stealth Products was first introduced to the market back in 1999, the only product produced was a sophisticated head positioning system well ahead of its years, the Ultra QCR. In the world of complex rehab, each individual presents their own unique challenges for support and positioning due to the vast number of diagnosis’s and injuries. Over the years Stealth Products has upgraded and added to its arsenal key products to help support individuals with this battle. With a wide range of products designed to solve any control or positioning puzzle, Stealth Products has distinguished itself from the rest of the pack as the leader in posterior head support and positioning.

Head Support Systems

Posterior head supports are designed to cradle the head and are primarily used as a resting spot with nominal lateral support. Stealth Products offers a variety of posterior head supports at an affordable price!

- Comfort Plus Series*
- Tri Comfort Plus Series*
- Adjustable Comfort Plus Series*
- All Positioning Series*
- Combo Series*
- Contoured Series*

Individuals who:
- require minimal to no support
- are able to maintain a neutral head position
- have a mobility base with tilt (recline)

[*] Shown with our versatile swing-away system (page 24)

Head Positioning Systems

Head, neck, and shoulder positioning can be one of the most difficult challenges we face. Stealth Products offers an array of products to solve these most difficult needs. With our intuitive technology and sleek design, you can rest assured that the most targeted position can be achieved.

- Stealth Ultra Series*
- i2i Series*

Individuals who:
- cannot maintain neutral head position due to tone, fatigue and physical deformity
- requires alternative drive controls and/or switch activation

Compatible with
The name says it all! When it comes to posterior head support, the Comfort Series is a must! Luxurious comfort with plush foam construction and sleek design make the Comfort Plus a favorite.

HEAD POSITIONING

Stealth Ultra Series*

The “Ultra” head positioning system was the first product Stealth designed. Its advanced technology continues to evolve from the Ultra, to the Ultra QCR and now the Ultra QCRS; pioneering the new standard of head positioning.

The Ultra recognized that every posterior head support needs to be as individualized as the person requiring it. Finally support pads / switch sides / alternative drive controls were able to be added in a Quick, Clean, Reliable and Simple way. The Ultra QCRS upgrade featured a center channel link that enabled independent depth adjustment for both the occipital and sub-occipital supports.

With the addition of the SU980, you can transform any of Stealth Products head positioning systems into an “Ultra” configuration.
Building an Ultra

The Ultra QCRS is an all encompassing head positioning system with adjustment capabilities and a host of options/accessories to meet virtually requirement.

Now follow 5 easy steps and you are done!

**Step 1: Choosing an Occipital Pad (**)

- **Ultra Large 500 Pad**
  - 6" L x 3.75" H
  - (15.24 cm x 9.43 cm)
- **Ultra Small 510 Pad**
  - 4.5" L x 2" H
  - (11.43 cm x 5.08 cm)
- **Ultra Niño 520 Pad**
  - 3" L x 3" H
  - (7.62 cm x 7.62 cm)
- **Ultra Niño 530 Pad**
  - 3" L x 2" H
  - (7.62 cm x 5.08 cm)
- **CPN350**
  - 6" L x 4.5" H
  - (15.24 cm x 11.43 cm)

**Occipital Pad**

The occipital pad cradles the head and is primarily a resting spot with nominal lateral support, although it also acts as a posterior boundary minimizing hyper-extension from abnormal reflexes or tone. The occipital pad is necessary for transportation as well as tilt and recline features.

**Step 2: Swing-Away Hardware (Optional) See page 24**

**Step 3: Ultra QCRS Channel Link (**)

- **SU980**

**Step 4: Sub-Occipital Pad (**)

Positioned at the base of the skull, and used in conjunction with an occipital pad, the sub-occipital pad provides additional lateral and posterior support for individuals that require mild to moderate assistance in maintaining midline positioning. The sub-occipital is malleable, so it can be contoured specifically for each individual, which alleviates the tendency to suspend the head or create excessive pressure on the neck.

- **600**
  - 8.5" L x 2.75" H
  - (21.59 cm x 6.99 cm)
- **610**
  - 6.375" L x 2.25" H
  - (16.19 cm x 5.71 cm)
- **620**
  - 10.5" L x 2.75" H
  - (26.67 cm x 6.99 cm)

**Step 5: Mounting Hardware (See page 27)**

HEAD POSITIONING

Clinical Guidelines

This clinical guideline should be used as a general reference for product applications. Final decisions regarding size, material, foam, and gel placement should be left to qualified professionals who are familiar with the individual’s specific needs through evaluation and/or trial and observation. The Ultra comes with an occipital pad, ultra channel, sub-occipital pad, and optional facial lateral pads and switches - see below.

How it Works?

The occipital pad cradles the head and is primarily a resting spot with nominal lateral support, although it also acts as a posterior boundary minimizing hyper extension from abnormal reflexes or tone. The occipital pad is necessary for transportation as well as tilt and recline features.

Positioned at the base of the skull, and used in conjunction with an occipital pad, the sub-occipital pad provides additional lateral and posterior support for individuals that require mild to moderate assistance in maintaining midline positioning. The sub-occipital is malleable, so it can be contoured specifically for each individual, which alleviates the tendency to suspend the head or create excessive pressure on the neck. Sub-occipital pads are engineered with Memory Metal that contours to an individual’s specific shape without losing strength. This pad should not touch the individual’s mandible.

Facial lateral pads are preferable for individuals with considerable uncontrolled movement such as seizures, reflexes, or individuals with low tone or cognition. Facial pads can be used to facilitate proper head alignment and deter further deformity or shortening of muscles.

Facial switches are both practical and easily accessible. When embedded in a facial pad they become a discreet and supportive switch access point. Facial switches are also valuable in maintaining muscle strength or developing good head alignment.

Maximizing Effectiveness With The i2i

Individuals who require substantial support and positioning, have minimal head control, or hook around their headrest may consider the Ultra used in conjunction with a low profile i2i and chin prompt. This system is a complete therapeutic tool offering posterior, lateral and anterior support. The chin prompt will be more beneficial than facial pads for individuals developing active head control because it is easily raised and lowered as needed throughout the day.

The i2i Ultra can be further customized with swing-away facial pads and switches. Swing-Away lateral facial pads can enhance alignment or provide additional support during fatigue. Also, facial switches are highly accessible and can be used therapeutically to encourage further development of active head movement.
**HEAD POSITIONING**

What makes the SU the best?

The Ultra QCRS has been enhanced with our unique link system that makes this system the most effective and versatile head positioning system on the market. With its one tool setup design, setup and adjustments are quick and easy. For the most challenging situations you may encounter, consider using the i2i to maximize effectiveness.

**Shown Systems Set Up**

Top system packed with a 500 occipital pad and a 620 sub-occipital pad, with the SUS9-B-HW swing-away system including one egg switch mount ESM with a black egg switch ESBLK, and a 900 facial pad mounted in the sub-occipital pad base, if not specified by default it is mounted in the occipital pad base. The system is mounted with the Ultra QCRS channel SU980 improved with our unique link system for unlimited adjustability with the T WB480-QCRS hardware. Pad covers upholstered with the standard C51 black neoprene. The bottom system has a I2I450 as a sub-occipital pad with a TD100 tone deflector and I2I460 chin prompt, 500 occipital pad with ultra channel and T WB480-QFDM hardware.
HEAD POSITIONING

i2i Series

Layered latex free closed cell rubber foam on a coated metal shell and covered with a soft, durable stretch material.

All materials meet California 117 flammability standards

The i2i has been one of Stealth's signature products and one that is recognized around the world. The i2i head, neck and shoulder positioning system is offered in eleven different series. We have made significant improvements through the years and now have added a few more. (Please refer to www.stealthproducts.com for more information)
Why it works?

Head and neck positioning is one of the most difficult challenges we face. The i2i system was developed by Leslie Fitzsimmons PT, ATP who, after trying all available options, decided that enough was enough and designed the i2i system for the most challenging students at Lakeview School in New Jersey. The unique integrated form (shape) of the i2i connects the head, neck and shoulders and forms a support similar to that of an exoskeleton. Unlike many collar type devices, the i2i does not position low on the neck which tends to leave the upper neck and head unsupported. The anterior arms of the i2i act as an anchor for the chin prompt, provides an anterior thoracic boundary and creates a channel to direct extensor tone into a midline position. The lateral component promotes midline head position and offers cervical support while maintaining range of motion (ROM). As a individual begins to extend, their head is invited back into a more neutral position. A midline position discourages reflex postures and provides appropriate proprioceptive input. It has also been found to promote the development of controlled neck flexion and extension.

i2i Available Sizes

Features & Add ons

Adjustable Arms
Designed to pivot anterior arms laterally to aide in removal and placement of i2i. Also, it allows unique positioning and flexion with a locking mechanism to keep your adjustments in place.

TD100 Tone Deflector
The tone deflector is a headrest add on that deflects the pressure of high tone away from the hardware. Letting your settings stand over the test of time.

Real Results!

Default pad’s foam and upholstery

Extremely wide range of upholstery and foam options. Go to page 26 for more.
**Unique Shape**

The unique, integrated shape of the i2i provides a maximal, proximal foundational connection between the head and neck. The sub-occipital and integrated low profile occipital components provide posterior support and set a limit to cervical extension while also offering a resting spot.

**Anterior Arms**

Anterior arms act as an anchor for the chin prompt and provide an anterior thoracic boundary that channels movement into a midline position. With children, it is especially important the anterior arms don’t obstruct shoulder movement.

**Lateral Components**

The lateral component promotes midline head position and offers cervical support while maintaining range of motion (ROM). Individuals with excessive weakness and poor head control should choose a more intimate fit while individuals with more controlled movement may choose a looser fit. It is recommended for proper i2i fitting to have at least a 1/4” to 1/2” spacing between the individual’s neck and i2i.

**Chin Prompt**

The chin prompt is a dynamic support that provides foundational anterior head positioning. When systematically raised and lowered, it is an excellent therapeutic tool that encourages neck muscle strengthening. The chin prompt was carefully crafted and engineered with a curved posterior that prevents airway obstruction and a width that prevents an individual’s chin from rolling over the front. Additionally, the prompt is made with a closed cell foam that prevents sinking and the straps are designed to slide if too much pressure is exerted. A variation of the chin prompt is also offered that is specifically designed for the trachea. For safety, the chin prompt should only be used under a caregiver’s supervision, and is NOT to be used during transportation.

**Customized Frame**

With the redesigned i2i standard frame you will be able to adjust and cut the foam to fit your individual’s specifications even if no ear cutouts were specified.

**Ear Cutouts**

Individuals with excessive lateral flexion should consider ear cutouts on the i2i. The cutouts are specifically designed to increase ROM while reducing excessive lateral flexion and rooting reflexes. Also, ear cutouts should lessen friction and pressure for those with severe lateral flexion thereby reducing irritation and deformity.

**Adjustable Arms and Locking Mechanism**

The i2i can now be equipped with adjustable arms that allow for easy removal and placement of i2i as well as offer unique positioning and flexion. The locking mechanism allows you to keep your adjustments in place.
**How to measure**

**Note if...**
- You need foam build-up or removal
- You want gel padding on selected areas (other than shown standard)
- You need custom arm length
- You need adjustable arms or gel insert

**Sizes shown as inches (centimeters)**

SWING-AWAY SYSTEMS

With the addition of Stealth’s swing-away hardware, you can upgrade a simple posterior head support into a head positioning system. Stealth’s swing-away hardware is designed to be reliable, lightweight, clean, and discreet so that the hardware blends in with its surrounding so “you see the person, not the hardware!” It features an easy one-hand release mechanism enabling pads and switches to swing away back 100º, and just as easily return to their original position. This convenient feature is useful for transfers, therapy, and fatigue issues. It’s no wonder why Stealth Products has moved to the “HEAD OF THE CLASS.”

Swing-Away Hardware

SUS9 Series

SUS9-B-HW
Swing-away with left and right ears with standard 9” (26.86 cm) rods.
Compatible with: AP, CB, i2i, and SU Series

SUNS9 Series

SUNS9-B-HW
Pediatric swing-away with left and right ears with standard 6” (15.24 cm) rods.
Compatible with: CPN350 and SUN Series

CPS9 Series

CPS9-B-HW
Swing-away with left and right ears with standard 9” (26.86 cm) rods.
Compatible with: CP Series

OTTOS9 Series

OTTOS9-B-HW
Swing-away with left and right ears with standard 9” (26.86 cm) rods.
Compatible with: OB and TCP Series

See more of our swing-away systems at www.stealthproducts.com

Rod Sizes

SU262
6” (15.24 cm) bendable rod

SU260
9” (22.86 cm) bendable rod (Standard)

SU264
13” (33.02 cm) bendable rod

SU265
18” (45.72 cm) bendable rod

SU266
24” (60.96 cm) bendable rod

Facial Pads

910 Pad
3” L x 2” H
(7.62 cm x 5.08 cm)

900 Pad
4.5” L x 2” H
(11.43 cm x 5.08 cm)

920 Pad
6.375” L x 2.25” H
(16.19 cm x 5.71 cm)

930 Pad
6.375” L x 1.5” H
(16.19 cm x 3.81 cm)

CS1
Neoprene black

Standard
Closed cell foam

Standard
Aluminum base

Switch Mounts

ESM - Egg Switch Mount
1.75” L x 1.25” H
(4.45 cm x 3.17 cm)

SP625
Sip & Puff mount for swing-away systems

CN600
12” (30.48 cm) Flex micro-lite switch mount CN600-B Both Sides

SSM-100
Spec-Switch mount

Rods can be cut to desired size with bolt cutters or a hacksaw. Rod caps slip over cut ends. Can be straightened, or bent, to customize. Warning! Repeated bending will result in breakage.
There is no limit on what you can accomplish with our swing-away systems! Regardless of the individual’s needs, capabilities or motor functions, a swing-away system can be used to position any pad, switch or control wherever it is most beneficial. For more information call us or visit our website.

Joystick Mounts

- SM600: Mini proportional joystick mount with rod
- SM610: 1812 Joystick mount
- F8674-RING-CN: Flex tubing figure 8 specially designed for the i-Drive®

Compatible with Stealth’s alternative drive control system

Hardware is an essential tool for getting a carefully considered headrest into the correct position. Stealth carries a variety of options to help achieve your positioning goals. Whether you need hardware with minimal adjustment or highly adjustable, we have you covered!

**Straight Hardware**

- **Available in**
  - 17 mm
  - 1 in

- **HMO400**
  - HMO400-17
  - Standard straight hardware
  - (1/2" square tubing)

- **HMO475-1**
  - HMO475-17
  - Multi-Axis hardware
  - (1/2" square tubing)

**NOTE**

Extreme durability, securely locking adjustment points and universal seat back mounts are standard on all hardware.

**Link Style Hardware**

- **Available in**
  - 17 mm
  - 1 in.

- **TWB485-1**
  - TWB485-17
  - Multi-Axis link style hardware
  - (1/2" square tubing)

- **TWB480**
  - TWB480-17
  - Link style hardware
  - (3/4" round tubing)

- **TWB480-FDM**
  - TWB480-17FDM
  - Link style hardware with flip down mount
  - (3/4" round tubing)

**Extras**

**FLIP DOWN**

- **FDM350**
  - Flip down mount
  - (1/2" square tubing)

**TONE DEFLECTOR**

- **TD100**
  - 17 mm Ball

- **TD101**
  - 1" Ball

The Tone Deflector serves two main functions: Absorb and Avert. This intuitive design will absorb quick impact compression and avert slanted angle loading. The Tone Deflector (TD) will be the premier addition for any high tone situation.
